

DID YOU KNOW...?

Here are a few questions we get asked all the time...

Can I have prescription lenses put into sunglasses?

Yes, you can! But not all sunglass frames are designed to accept prescription lenses. We have a great range of men's and women's sunglasses in store for you to choose from. You can choose from a range of tint colours and even opt for polarised sunglasses.

What is Behavioural Optometry?

Behavioural Optometry is about looking at your vision in terms of what you use your eyes for most, such as reading, computer work or learning to read and write, to ensure your vision is working easily and comfortably. This is because, the way that your brain interprets what you see does not depend solely on how clear just your sight is. It's a more holistic approach to the treatment of vision and visual perceptual problems.

Everyone can benefit from this holistic approach, but it is especially suited to those with eye motor control problems, lazy eyes, developmental delays, neurological damage or learning delays.

What does an eye exam involve?

A routine vision examination in our office takes approximately 30 to 60 minutes. We thoroughly assess your eyes using our nine-step process which consists of a review of your full eye history, internal and external eye health checks, glaucoma, cataract and macular degeneration checks, specialised tests and much more. First and foremost, it's our goal to make sure you feel helped, armed with knowledge and leave us with a clear understanding of what to expect next.

Cheaper contact lenses delivered direct to my door?? Yes please!!

We are super excited to be able offer you online ordering for your contact lenses.

Ordering online is cheaper and delivery is FREE! We know it's going to be a great time and money saver for many of our customers.

It's easy to order online, here's what you need to do:

- 1. Register your details and create your account.**
Create a username, password and enter your email address and you're away.
- 2. Click on SHOP and find your preferred lenses.**
- 3. Enter your prescription details.**
Not sure of your prescription details? Email us at reception@visiquegreerton.co.nz and we'll get back to you with your details.
- 4. Select your options.**
There are a few great options to choose from. You can choose a one-off purchase or for daily lenses opt to pay monthly and get an automatic shipment every month. Or for less frequent lenses, order as little as 3 months' supply or as much as a whole year.
- 5. Enter your shipping and payment details and click 'Place Order'**
You can also choose to use Afterpay! It's that easy.

To make life even easier, we can set your account up for you at your next appointment.

Order online now!

Please note: Free delivery is only applicable within New Zealand. Lenses must be signed for on delivery, so please make sure you send them to a suitable address.

Why do I need an eye exam for contact lenses?

Modern contact lenses are a high technology medical device; they are very safe if fitted and used correctly but can have serious consequences if abused.

A baseline eye exam allows us to advise on the best lens options, identify any eye health or structure issues that may affect lens wear performance and allows us to identify changes to eyes or vision when contact lenses are worn.

What does a contact lens test and fitting involve?

If you are trying contact lenses for the first time, our contact lens fitting begins with a comprehensive vision and eye health test. The various types of contact lenses are discussed and the chosen type may be trialed or custom designed. The optometrist will show you how to use, clean and store your lenses. We will organise follow up aftercare appointments in case changes in the lenses are needed for the best fit or vision during lens adaptation.

There are many different types of contact lenses available, and our optometrist will help determine which ones are best for you based on your needs, lifestyle and budget.

How quickly can I get my glasses?

This is a question we are often asked as post COVID-19, many optometrists have struggled with the supply of new lenses and frames. At Visique Greerton, delayed supply has not been an issue for us or our customers.

We are currently able to turn around delivery of frames and lenses in less than a week for standard/uncomplicated orders and in less than two weeks for complex ones. We are also usually able to fit in appointments within the next 5-10 working days unlike others who currently have a 4-6 week wait.

My eyesight is great, but do you have blue-light blockers for screen work?

Yes, we do! If you use digital devices daily, Eyezen digital screen protection lenses are designed to relax and protect your eyes from digital screens.

How it works: The lens filters out some of the harmful blue-violet light emitted from digital screens which can cause premature eye ageing. There is also an enhanced lower portion of the lens which is designed to ease eyestrain. In fact, digital screen protection lenses will provide you with sharper vision than your standard, single vision lenses. Whether you have or have not experienced digital eye strain or whether you wear glasses or not, everyone can benefit from using Eyezen lenses.
